                       recombinantly expressed by a host cell genetically engineered with a vector containing the encoding nucleic acids. The receptors can be used to screen for their antagonists. The products can be used to identify agents which modulate the activity of the receptors for use in clinical conditions such as brain stroke, brain or spinal cord traumas, infection and inflammation, cognitive disorders, epilepsy, affective and mood disorders in general, including depression, various movement disorders including Parkinson's disease, Huntingtons Chorea and schizophrenia, as well as those conditions that are associated with the development of chronic or acute forms of pain, or cardiac anoxia. The products can also be used for detection, production of antibodies and production of transgenic animals as models for mutation and structure/activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               373 AGCGGTTGTGTCCCGAGTATCCCACCGGCAGGCTCTTGTTCCTCTGACCGAGGTTGTA

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified by DNA chip analysis as given in the specification, and comparing the expression level to an expression of Gs is indicative of GCA.

Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in Gs; (2) screening (M3) for an agent capable of modulating GAA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene(s) from Gs, where the level of expression of the gene is indicative of inflammation;

(4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation growtheresion of gene(s) from Gs in the tissue, by contacting a tissue having inflammation with an agent that modulates the expression of gene(s) crowdlating GAA, M3 is useful for screening an agent capable of modulating GCA preferably in an inflammation in a tissue; M4 is useful for response in a subject, exposure of a subject to a pathogen or sterile cresponse in a subject, exposure of a subject to a pathogen or sterile cresponse in a subject, exposure of a subject to a pathogen or sterile cresponse in a subject, exposure of a subject to a pathogen or sterile cresponse in a subject, exposure of a subject to a pathogen or sterile cresponse in a subject, exposure of a subject to a pathogen or sterile cresponse in a subject, exposure of a subject to a pathogen or sterile cresponse in a subject, exposure of a subject to a pathogen or sterile companies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Detecting granulocyte activation by detecting differential expression
                                                                                                                                                                                                                                                                                                                                                                                     viral infection; parasitic infection; protocoal infection; fundal infection; sterile inflammatory disease; psoriasis; rheumatoid arthritis; glomerulonephritis; asthma: thrombosis; cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease; crohn's disease; ulcerative colitis; periodontal disease; granulocyte activation; chronic inflammation; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states
                                                                                                                                                                                                                                                                                                                      Human cDNA differentially expressed in granulocytic cells #909.
                                                                                                                                                                                                                                                                                                                                                                    granulocytic cell; DNA chip; bacterial infection;

reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease. Crohi's disease, ulocarative colitis, periodontal disease, also bacterial infection, viral infection, parasitic infection, protozoal infection, fungal infection and MS is useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did not form part for the specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pot_sequences.

The present invention describes a method (MI) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL7010), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening a clivity and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, presst, stomach, lung, thyroid, cesophageal, ovarian, kidney, prostate or panoreatic cancer, estimated to account as colon, presst, stomach, lung, thyroid, cesophageal, ovarian, kidney, prostate or panoreatic cancer, estimated to account as a cancer and contains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        986 GACTGGCACGTACGGCACTGCAACCCATCTATGAGTTCCATGGGCTGTACGAAGAGAAA 1045

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A cDNA clone (AAT33855) codes for the human urinary bladder P2x receptor (AAM04218), a ligand-gated ion channel that opens upon binding of extracellular ATP. It was isolated from a bladder cDNA library using a rat smooth muscle P2x receptor probe. Rat vas deferens, superior cervical ganglion and dorsal root ganglion P2x receptor CDNAS (AAT33852-54) have also been isolated. These CDNAS can be used to produce recombinant P2x receptors in host, esp. mammalian, cells for use in screening (ant)agonist
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score 203.8; DB 17; Length 2643;

The present sequence represents a human expressed sequence tag (EST). The polynucleotide, which is a secreted EST, and the encoded protein the polynucleotide, which is a secreted EST, and the encoded protein the suitable for treating, between the melical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, haematopoiesis regulating activity, tissue growth activity, haematopoiesis regulating activity, receptor/ligand activity, haemostatic and thrombolytic cativity, receptor/ligand activity, anti-inflammentory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The polynucleotide may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                         New polynucleotides encoding human secreted proteins - derived from e.g. human blood, kidney, foetal lung, placenta, testes, brain, ovary, pituitary, retina and colon cDNA libraries.
                                                                                                                                                                                                                                 Merberg
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 294 BP; 81 A; 72 C; 68 G; 73 T; 0 other;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. US20020151480A1

GENERAL INFORMATION:
APPLICANT CHUN, MIYOUNG

TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR TREATING
TITLE OF INVENTION: CARDIOVASCULAR DISEASE USING 10218
FILE REPRENDER: MAI-227

CURRENT APPLICATION NUMBER: US/09/833,082

CURRENT APPLICATION NUMBER: 2010-04-10

NUMBER OF SEQ ID NOS: 2

SOFTWARE: FASTESEQ for Windows Version 4.0
